Field Record: SL-PADDY-KALAWEWA

Kalawewa, Anuradhapura District. Dry Zone, irrigated from Kala Wewa. Cultivator H. G. Jayasena.

Document AV-FR-02 | Category: farm_record | Record current to 2 October 2026
Synthetic farm record for teaching. The fields are AgriVibe demonstration fields; cultivators, dates, observations and satellite values are invented and consistent with the AV-KB-001 thresholds.

Field details

Field id: SL-PADDY-KALAWEWA
Location: Kalawewa, Anuradhapura District
Agro-ecological zone: Dry Zone
Water regime: Irrigated, Kala Wewa distributary channel; inlet at the eastern end
Cultivated extent: 2.4 hectares
Cultivator: H. G. Jayasena

2026/27 Maha season

- 14 September 2026: basal fertiliser applied, quantity as per the Grama Niladhari division recommendation.
- 15 September 2026: sowed Bg 352 (3½-month age class), broadcast method.
- 26 September 2026: small dry patches seen at the western end, furthest from the inlet.
- 29 September 2026: first top dressing applied, quantity as advised by the Agriculture Instructor.
- 2 October 2026: Department of Meteorology forecast, noted by the cultivator, of heavy showers in the area from 4 to 6 October.
- Open question from the cultivator: whether to bring the next top dressing forward to before the forecast rain.

Table 1. Maha 2026/27 satellite observations

16-23 Sep 2026. Mean NDVI: 0.22; Std dev: 0.040; CV: 0.18; Uniformity: moderately_variable; Valid observations: 2; Data quality: moderate.
24 Sep-1 Oct 2026. Mean NDVI: 0.27; Change: +22.7%; Trend: significant_increase; Std dev: 0.060; CV: 0.22; Uniformity: uneven; Valid observations: 3; Data quality: moderate.

Rainfall over the two periods was light. The western end of the field shows lower greenness than the eastern end in the latest observation.

2026 Yala season (completed)

- 28 April 2026: sowed Bg 352, broadcast.
- July 2026: low rainfall and a reduced channel rotation. The western tail of the field dried out between issues.
- 14 July 2026: AgriVibe advisory issued for a significant decline under dry conditions; inspection of the western tail recommended.
- 24 July 2026: severe decline continued for a second period. The Agriculture Instructor visited, noted water stress at the tail end, and advised the cultivator to raise the water schedule at the farmer organisation meeting.
- 26 July 2026: the cultivator notified the AAIB representative of drought damage to the western section.
- 20 August 2026: harvested. The cultivator recorded a lower harvest than the previous Maha.

- Fertiliser subsidy for the 2026 Yala season was received for 2.0 hectares of the 2.4 hectare field.

Table 2. Yala 2026 satellite observations

9-16 Jun 2026. Mean NDVI: 0.55; Std dev: 0.060; CV: 0.11; Uniformity: moderately_variable; Valid observations: 4; Data quality: good.
23-30 Jun 2026. Mean NDVI: 0.60; Change: +9.1%; Trend: moderate_increase; Std dev: 0.070; CV: 0.12; Uniformity: moderately_variable; Valid observations: 4; Data quality: good.
7-14 Jul 2026. Mean NDVI: 0.50; Change: -16.7%; Trend: significant_decline; Std dev: 0.120; CV: 0.24; Uniformity: uneven; Valid observations: 4; Data quality: good.
21-28 Jul 2026. Mean NDVI: 0.41; Change: -18.0%; Trend: significant_decline; Std dev: 0.130; CV: 0.32; Uniformity: uneven; Valid observations: 4; Data quality: good.
